SUMMARY

Full Stack Web Developer with 2+ years of experience building and deploying production-grade systems — including a multi-tenant restaurant platform live across 3 clients and an LMS serving 150+ active users. Skilled in React.js, Node.js, Express.js, MySQL, and MongoDB, with hands-on expertise in RESTful APIs, JWT authentication, WebSockets, and RBAC. Delivers end-to-end — from frontend development and backend architecture to Linux server deployment and infrastructure management.

SKILLS & INTERESTS

Programming Languages JavaScript

Database Management SQL, MySQL, MongoDB

Soft Skills Problem-Solving, Time Management, Adaptability, Team Collaboration

Frontend Technologies HTML, React.js, CSS

Backend Technologies Node.js, Express.js, REST API, Web Socket

Deployment & DevOps Linux Server Management, Domain & DNS Configuration, Subdomain Setup, SSL Setup, Process Management (PM2), Reverse Proxy (Nginx), SSH & Remote Server Administration

Tools & Version Control Git

Interests Cricket, Continuous Learning, Skill Advancement

Languages English, Malayalam

EXPERIENCE

Full Stack Web Developer

Jan '25 — Jun '26

FinGlider Solutions LLP

Bangalore, India

- Deployed and maintained 3 production web applications on Linux servers, managing the full infrastructure stack including SSH access, PM2 process management, Nginx reverse proxy, domain/DNS configuration, subdomain setup, and SSL certificate installation
- Restaurant Management System:
 - Developed and deployed a full-stack restaurant management system across 3 live restaurant clients, supporting 5+ order modes including dine-in, QR-based, online, takeaway, and delivery
 - Built multi-tenant architecture serving 3 separate restaurant businesses from a single codebase, with per-client region, language, and AMC configuration
 - Integrated WebSocket for real-time order notifications and customer feedback capture, enabling kitchen and admin dashboards to receive orders instantly without page refresh
 - Developed a dedicated takeaway screen for efficient order processing
 - Built secure RESTful APIs and optimized database workflows for scalability and performance
 - Implemented table management (visual layout), reservations, and digital ordering (KOT) with live billing
 - Implemented JWT-based authentication and role-based access control (RBAC) to secure API endpoints and manage multi-user access across the system
 - Developed product and category management with Excel bulk upload functionality
 - Implemented time-based menu display with configurable product availability across different time slots (Morning, Afternoon, Evening, and Night).
 - Implemented table-specific QR code generation, enabling customers to scan a QR code at their table and place orders directly through the QR-based ordering system
 - Implemented internationalization (i18n) supporting multiple languages (e.g., English, Arabic) with dynamic language switching and full RTL/LTR layout adaptation
 - Tech Stack: React.js, Node.js, Express.js, MongoDB
- Supermarket Management System:

- Contributed to a scalable supermarket management system tested with 500+ products, covering inventory control, stock tracking, and end-to-end customer ordering
- Built batch-wise inventory management with expiry tracking, preventing stock overrun and expired product visibility in the storefront
- Developed dynamic product pages with multi-image display, variant selection, and zoom functionality, improving product browsing experience across devices
- Optimized backend queries and data models for 500+ product catalog, improving response performance for high-volume inventory and order operations
- Built a two-way customer feedback system and automated order tracking — capturing feedback via online orders and admin-triggered email forms, with tracking links sent automatically upon order acceptance
- Tech Stack: React.js, Node.js, Express.js, MongoDB
- Learning Management System (LMS):
 - Developed and deployed a multi-role LMS serving 150+ active users including 100+ students and 50+ instructors in a live production environment
 - Built comprehensive course management system covering courses, syllabus, study materials, and role-based quiz creation with automated result pages showing answers and correct responses
 - Designed RBAC controlling access across Admin, Instructor, and Student roles, ensuring secure and isolated access for each user type in a shared production system
 - Designed fully responsive UI ensuring consistent experience across desktop, tablet, and mobile devices for a production-facing student and instructor platform
 - Tech Stack: JavaScript, Node.js, Express.js, MySQL

Web Developer Intern
FinGlider Solutions LLP

May '24 — Dec '24
Bangalore, India

- Contributed to initial system architecture and designed MySQL database schemas from scratch covering course, user, quiz, and study material modules
- Developed and integrated backend APIs for core LMS features including course management, quiz creation, and study material handling
- Expanded scope mid-internship from backend to full-stack, independently building responsive frontend components using HTML, CSS, and JavaScript
- Implemented role-based access control (RBAC) for Admin, Instructor, and Student roles, ensuring secure and isolated access across the platform
- Managed codebase using Git within an Agile team, contributing through feature branching, pull requests, and code review workflows
